September Status Report

Activities of Team Members

In September, data analysis was the primary focus for the first weeks, with work on the science report continuing when relevant data was available. The payload was disassembled and inspected for damage, and all systems were confirmed to be intact and capable of normal operations.

Issues Encountered in Payload Design

No issues were encountered during design.

Milestones Achieved

Data analysis has confirmed successful EagleSat operations, and all systems have been verified to be in good condition following the flight. Work on the science report and data analysis is ongoing, but progressing at a good rate.

Current Team Members

Below is an organization chart of the current team.
