

Scarlet Hawk II-HASP 2014

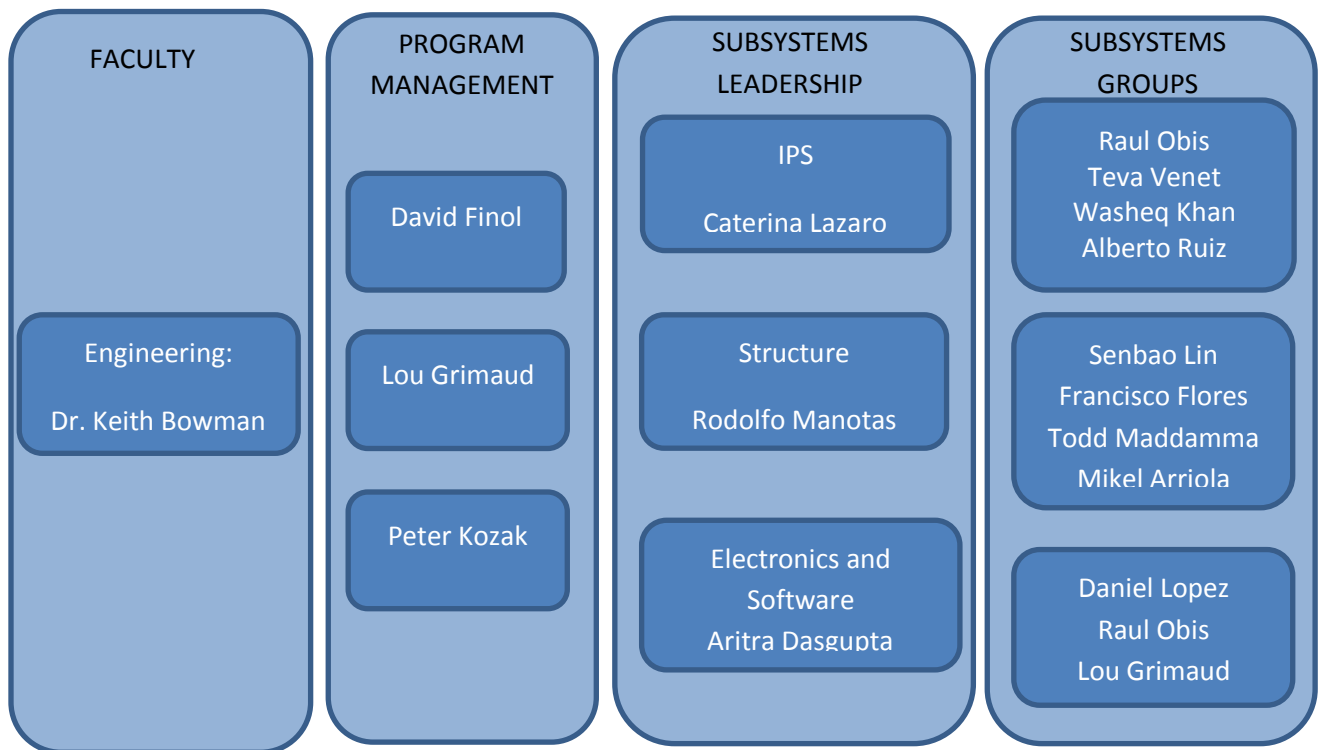

August Status Update

08/29/2014

Summary of Progress

The entire team concentrated this month on flight operations. In an initial assessment of flight operations, the team could successfully monitor the Independent Power System and had control over the system of cameras. The output power of the solar cells was very stable and reliable during the entire flight. The data also suggested that no cracks were present during the flight on the solar cells. A significant amount of pictures were taken during the flight as well. The team also received the payload and made an initial post-flight analysis of the integrity of the payload. The team will then be processing all flight data during the upcoming month.
