Teams did the following work during June 2015:

UND:

- (i) Sean has terminated his work on the HASP 2015 due to other assignment. He is replaced by Christopher Follette.

UNF:

- (1) Team is actively working on several works, which is shown in the following pictures.

Fig.1 Brittany is explaining Joe about the block diagram of the payload, electronic circuits and sensors.

Fig.2 Joe is discussing with Brittany about the design of payload and software work.

Fig.3 (a) Mathew is fabricating the payload body and (b) View of one side of the payload body

Fig.4 Joe is operating the high vacuum systems for the fabrication of thin film gas sensors.

- (2) Fabrication of the final version of sensors and its testing and calibration are going on.
- (3) Body work of the payload is about to complete. Then, sensors boxes and electronic circuit board will be integrated with the payload body.
- (4) The team is working on the final version of PSIP, which will be submitted in the next week.
- (5) Team is thankful to Mr. Michael Stewart for his pre-PSIP comment. The tentative complete test data string may have the following information. Table-1 shows the information about serial data record including record length and information contained in each record byte. Total record length will be 238 byte.
